

RAITH GmbH opens the Experience Center Europe in Dortmund, strengthening North Rhine-Westphalia as a high-tech hub

With the grand opening of the RAITH Experience Center Europe on 6 May 2026 in Dortmund (Walter-Bruch-Straße 9), the internationally active nanotechnology company is sending a clear signal of innovation and technological progress in the strategically important region of North Rhine-Westphalia, Germany's most populous federal state. The new center serves as a platform where state-of-the-art technologies can be experienced as well as as a venue for exchange with partners from industry and science. As a global market and technology leader in maskless nanofabrication, RAITH is thus underlining its role as a driving force for the digital future.

A new hub for innovation and collaboration

The Experience Center is far more than a traditional showroom: it serves as a central hub for customer dialogue, technology workshops and strategic collaboration. Here, RAITH showcases its technological expertise and creates an environment in which, together with international partners, innovative solutions in nanotechnology, semiconductor development, and materials research can be designed and tested. Semiconductors are the foundation of modern technologies that drive digital progress. The center thus becomes a key showcase for the company's capabilities and a meeting place for decision-makers from high-tech industries, research and development.

Dortmund as a symbol of structural change and a location for the future

By choosing Dortmund as the location for its Experience Center, RAITH is making a clear commitment to the North Rhine-Westphalia region as a major hub for innovation and technology. The city epitomises the successful transition from an industrial past to a modern center of science and technology. In close proximity to leading universities, research institutes and the Technologie Zentrum Dortmund, a dynamic ecosystem is emerging in which new ideas flourish and are put into practice. RAITH has been part of this environment for many years and actively contributes to further strengthening the region as a high-tech hub. The company's technologies form the foundation for key future sectors such as artificial intelligence, communications, mobility, healthcare and sustainable energy. In doing so, RAITH not only contributes to technological development but also to the economic transformation and competitiveness of North Rhine-Westphalia in an international context. The new Experience Center embodies this role by serving as a hub where innovation emerges, takes shape, and is transformed into practical solutions.
